

Series 2510 Water Conditioner

The Series 2510 Water Conditioner with 18x40 Brine System.

The Series 2510 control, optional by-pass and optional Demand Meter.

Easy

Settings are easy to understand and use. With a properly set timeclock and program you simply keep salt in it!

Water Conservation

Adjustable cycle times allow minimal water usage.

Choice of Controls

The 2510 Series is offered with a choice of time clock, for scheduled cycles, or a water meter for cycles based on water consumption.

Built In By-Pass

An optional single lever by-pass valve allows an easy way to by-pass the system and provides a simple disconnect.

Reliable

The five cycle 2510 Series valve is motor driven, there are no solenoids or diaphragms to stick or hang up. This is the most reliable system for consistent performance.

Two Tank

The two tank design protects controls from the harsh effects of salt and water that attack single tank systems.

Flexibility

Choice of salt tank sizes to fit most any space requirements.

2510 Series Ten Year Limited Warranty

A comprehensive owner protection plan. Ask for a copy of the warranty for complete details.

Dependable. The precision system that has made the Series 2500 System the choice of professionals for years.

1. Five Cycle Control Valve

- The 2510 Valve is powered by a motor driven piston to assure reliability in every cycle.
- The Noryl® valve body is corrosion durable and easy to service.
- Adjustable cycles allow optimum settings for specific installations.

2. Attractive System

The optional hard shell thermal cabinet, that protects against condensation, is white with black trim and has a matching brine tank.

3. Rugged

The Resin tank has a smooth inner tank that is spun wrapped in fiberglass for exceptional strength. Tanks are made of FDA approved materials and certified by NSF.

4. Efficient

The 2510 Series high capacity resin, while being the most durable, also ensures the most efficient use of salt.

5. Design Options

- The 2510 Series offers two primary designs: The resin scrubber removes build up on the resin beads which makes it ideal for rusty well water. (Shown in diagram)
- A conventional straight tube distributor is available, at no additional cost, for iron free water applications.

6. Durable

2510 Series salt tanks are made of rugged, seamless, polyethylene. Four different sizes of brine tanks are available to help fit the 2500 Series into most any space.

7. Security

The 2510 Series includes a safety brine system to provide shut down in the event of a failure, preventing brine overflow.

8. No Mushy Salt

The 2510 Series includes a salt shelf which keeps the bulk of the salt out of the water, eliminating the mushing and bridging experienced in conventional systems.
